DETAILED ACTION

PRIOR ART REJECTIONS

Statutory Basis

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The Rejections

Claims 25 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jones et al. (U.S. 5,549,786) in view of Lur et al. (U.S. 6,013,569)

Jones discloses an SOG plasma etch process with

(25) forming an interconnect (gate electrode) (12a, 12b, 12c, 12d) on a substrate (10) (see Figure 5);

forming a first insulating layer (20) on the interconnect (gate electrode) (12a, 12b, 12c, 12d) (see Figure 5);

forming a second insulating layer (22) "which later becomes 28c" on the first insulating layer (20) and the substrate (10) (see Figure 5);

forming a protective layer (29) on the second insulating layer (28c) such that the second insulating layer (28c) is enclosed by the protective layer (29), the first insulating layer (20) and the substrate (10) (see Figure 5);

(28) wherein the second insulating layer is a spin on glass layer (see column 6,

Page 3

lines 50-60).

Jones teaches the above outlined features except for forming a gate electrode.

However, Lur discloses one-step salicide process without bridging by (25).... a gate

electrode (see Figure 5). It would have been obvious to one having ordinary skill in the

art at the time of the invention was made to combine the above teachings of Jones and

Lur by forming a gate electrode or an interconnection is interchangeable. The

conductive layer is patterned to form whether an interconnection or a gate electrode to

meet its end use during manufacturing a semiconductor device.

Allowable Subject Matter

Claims 6-24 are allowed.

Claims 26-27 are objected to as being dependent upon a rejected base claim,

but would be allowable if rewritten in independent form including all of the limitations of

the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 25-28 have been considered but are

moot in view of the new ground(s) of rejection.

Applicant argues that neither Weybright does not disclose or suggest forming the

protective or capping layer on the second insulating layer so that the second insulating

layer is enclosed. However, Jones discloses an SOG plasma etch process with forming a protective layer (29) on the second insulating layer (28c) such that the second insulating layer (28c) is enclosed by the protective layer (29), the first insulating layer (20) and the substrate (10) (see Figure 5).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuong A Luu whose telephone number is (703)305-0129. The examiner can normally be reached on M-F (7:30-4:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Smith can be reached on (703)308-1323. The fax phone numbers for the organization where this application or proceeding is assigned are (703)872-9306 for regular communications and (703)872-9306 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0956.
